(54) Title: ELECTRONIC DEVICE AND ITS OPERATION EXPLANATION DISPLAY METHOD

(54)発明の名称: 電子機器装置およびその操作説明表示方法

72...IMAGING IS TO BE PERFORMED

(57) Abstract: There is provided an electronic device capable of displaying animation moving in different ways according to the internal setting state and eliminating the memory capacity oppression caused by the information required for realizing the animation. When a shutter button (12) is pressed in the help display mode, the flush ON/OFF setting information (52) held in an EEPROM (25) is referenced. If the value is flush ON, a 3-dimensional animation moving to emit a flush (104) of a 3-dimensional model (71) is created according to 3-dimensional model data. If the value is flush OFF, a 3-dimensional animation not emitting the flush (104) of the 3-dimensional model (71) is displayed. Thus, a user can visually and intuitively grasp the difference of the operation of the digital camera (100) according to the difference of the system setting states.
